ACKNOWLEDGMENTS

Thanks go to my wife and children for putting up with my continual lack of time to join them in their activities, to my data entry team composed of Kin Lau, Tom Leichenaur, John Rossin, and Kent Wilbur, and my data checkers, Madonna York and Diana Lottman, my System Analysis, Jim Penrose, Middle States Management for their computer, and to my publisher for understanding production problems.

William H. Wallace
December, 1983

INTRODUCTION

This Volume follows Volume I published in late 1981, and is a continuation of an effort to compile a comprehensive listing of magazine, newsletter, and other articles in a manner that would facilitate easy access to the mountains of information available to the Home/Personal Computer user. This volume contains over 26,000 references from 75 magazines and newsletters. None of the references inculded in this Volume duplicate references that appeared in Volume I.

THE INDEX is broken down into 14 major sub-indexes for the user's convenience in quickly locating information on a specific machine type. Within each sub-index, articles are further arranged by 22 subject categories.

THE INDEX has been continued for several reasons:

—to satisfy the many requests received as to when the next volume of this document would be available.
—to make the periodical literature more available to the user of Home/Personal Computers.
—to be a reference to the hundreds of programs published each year.
—to be a reference work for the Computer Science student to locate applicable research material.
—to provide a reference source for other publishers on past and future articles, and
—for the serious Computer Consultant who wishes to know the available literature on a particular subject.

Our whole production team sincerely hopes that you will find THE INDEX helpful as a reference.

HOW TO USE THE INDEX

THE INDEX is broken down into 14 sub-indexes by machine type and contains one section on General Articles.

We suggest that users approach THE INDEX by first locating topics of interest in the applicable machine-type sub-index and then cross check the general index to find additional material of interest indexed there.

At the end of the Index is a listing of magazines indexed, they are listed by their abbreviated names.The full name of the magazine, its address and other information concerning the publisher is given in each listing. These listings can serve as a source of copies for the individual publications. In addition, University Microfilms has agreements with several publishers to provide a reprint service upon request. Local libraries, local computer clubs and individual club members are good sources for locating back issues of desired magazines and articles.
